New functionality / improvements

This section shows the major improvements in each software release.

Version 2.04
- system management module
  - if you select "Reset to defaults with network settings" from the panel or press the reset button on your device, the IP address will be obtained from DHCP server and in case of failure the default address is 192.168.0.50
  - the option "Reset to defaults" sets the installer mode ("installer mode") to ON. Communication with the gateway is possible by switching the installer mode to OFF in the Manage -> Configuration menu

Version 2.03
- no new functionality

Version 2.02
- system management module
  - added ability to configure TCP port to connect to systemONE server

Version 2.01
- no new functionality

Version 2.00
- system management module
  - added the Failover IP option - if the DHCP server does not work, the device uses the last saved static IP address
  - added configuration restore options
- visualization module
  - added display of measured data

Version 1.12
- no new functionality

Version 1.11
- no new functionality

Version 1.10
- visualization module
  - added signal strength visualization
